

Otis® J Running Tool

Slickline Downhole Tools

The Otis J Running Tool sets the type J, E, P, F and L Otis locking mandrels in the Otis type J, E, P, F and L landing nipples.

The Otis J running tool consists of a top sub complete with fishing neck, sucker rod pin connection, shear pin holes for retaining the lock mandrel and an internal thread to accommodate a prong.

Lock mandrels being deployed by the J running tool are located and set by downward jarring. Once the lock mandrel has been set in the nipple, subsequent upward jarring will shear the tangential pins allowing the release of the J running tool.
